

Side-By-Side Combination Flashing (4 Skylights/Windows)

VELUX produces a range of combination flashings that allow the units to be installed side by side, above and below or a combination of both. 'Combi' flashings are available with a 100 mm centre channel between the skylight or roof window in both Side-By-Side and Above-Below combinations.

NB: Strict 100mm space between each skylight

When preparing to install skylights or roof windows in a combination or 'combi' scenario, it is vital that the rafters are spaced at correct centres. To calculate the rafter centres, simply add 100 mm to the width of the skylight or roof window units being used.

3 or more skylights can be installed side by side using the EKW 0001 and EKW 0003 kits with the addition of EKW 0002 kits.

The EKW 0001 and EKW 0003 kits provide the two outside flashing kits – EKW 0002 provides the centre flashings. Simply add as many 0002 kits as needed.

Side-By-Side configuration

Available for FS/VS/VSS/VSE/GGL/GPL

4 Skylights/Windows*

1 x EKW 0001 for left hand skylight

2 x EKW 0002 for centre skylights/windows.

Add extra EKW 0002 for any additional 'centre' skylights.

1 x EKW 0003 for right hand skylight.

*GGL/GPL use 0021 complete 'combi' kit (replaces EKW 0001 and EKW 0003).
